

Rashid GIS Agent — Comprehensive Knowledge Base V3: Ash Shati Ash Sharqi District

This document serves as the definitive, data-dense knowledge base for the "Rashid" digital agent via the Beyond Presence platform. It contains exhaustive, categorized information extracted directly from all 19 layers of the Eastern Province Municipality's GIS geodatabase, capturing every attribute available for deep spatial analysis.

1. District Administrative Overview

Ash Shati Ash Sharqi (الشاطئ الشرقي) is a major coastal district located in Dammam city within the Eastern Province of Saudi Arabia. The district is uniquely identified by the code **00500001062** and falls under the administrative supervision of the Eastern Province Municipality (Amana code 005001, Municipality code 00503100).

Demographically, the district has a registered population of **16,380 residents**. For context, the broader Dammam municipality encompasses a total population of 1,255,211 residents. Geographically, the district's computed perimeter is approximately **12.2 kilometers**, enclosing a total computed area of **4.48 square kilometers** (4,479,127 square meters). The spatial data is officially owned and maintained by the Amana's GIS department (FME), with the latest major data validation recorded in April 2026.

2. Urban Planning and Subdivision Framework

Urban development in the district is strictly governed by two major approved subdivision master plans that dictate zoning, setbacks, and building heights. The district itself is organized into four main neighborhoods: the Second Neighborhood Third Adjacency (818 parcels), the Third Neighborhood Fifth Adjacency (698 parcels), the First Neighborhood First Adjacency (634 parcels), and the Fourth Neighborhood Seventh Adjacency (516 parcels).

Master Plan 1/337 (Approved 1408 AH)

This foundational plan covers the planning of Abdulaziz Mubarak Al-Hassawi's land, located north of the Corniche Road along the First Street extension. It is a massive development scheme covering a computed area of **7.23 square kilometers**. The zoning regulations for this plan mandate a **maximum building height of 8.0 meters**, a minimum **street setback of 1.0 meter**, and a **side setback of 5.0 meters**.

Reorganization Plan Sh D 908 (Approved 1423 AH)

This secondary plan was approved to reorganize and merge specific parcels (parcels 549 to 557, and 476 to 489) within the first neighborhood of the original 337/1 plan. Owned by Fawaz bin Abdulaziz Al-Hokair & Partners Company, this specific commercial reorganization covers approximately **32,869 square meters** of prime land.

3. Cadastral Parcels and Land Use Economics

The district is subdivided into **2,676 distinct land parcels**, representing a total measured area of **2.69 square kilometers** (2,689,409 m²). The parcel sizes vary significantly based on their designated use, ranging from a minimum of 16 m² (utility rooms) to a maximum of 30,265 m² (major commercial/public facilities), with a median parcel size of exactly **750 square meters** and a mean of 1,005 m².

The district exhibits a highly mature development lifecycle:

- **Developed Parcels:** 2,256 parcels (84.3%) are fully developed.
- **Undeveloped Parcels:** 420 parcels (15.7%) remain undeveloped.
- **Licensed Parcels:** 1,478 parcels hold active licenses.
- **Invested Parcels:** 123 parcels are officially designated as municipal investments.

Detailed Land Use Distribution

The primary land use codes reveal a predominantly residential character supported by robust commercial corridors:

- **Residential (Code 100000):** 2,280 parcels. Specifically, 1,966 are standard residential (سكنی), with additional specific allocations for Imam housing (23) and Muezzin housing (23).
- **Commercial (Code 200000):** 254 parcels, serving as the economic engine of the district.
- **Public & Government (Code 300000):** 89 parcels, including 22 regular mosques, 1 Jami (Friday) mosque, 3 boys' primary schools, 3 girls' primary schools, and various municipal branches.
- **Utilities & Infrastructure (Code 400000):** 53 parcels, including 37 dedicated public parking lots, 4 water wells, 2 pump stations, and 2 electrical rooms.

Building Conditions and Zoning Regulations

The municipality enforces strict building conditions across the parcels, tracked by specific condition IDs:

- 1 **Standard Residential (Condition 1-أ):** Applies to 2,188 parcels. Allows 60% lot coverage, maximum of 2 floors, and a maximum height of 10 meters.
- 2 **Standard Commercial (Condition 1-ب):** Applies to 121 parcels. Allows 60% lot coverage, maximum of 4 floors, and a maximum height of 19 meters.
- 3 **Secondary Residential (Condition 2-أ):** Applies to 91 parcels. Allows 60% lot coverage, maximum of 4 floors, and a maximum height of 15.5 meters.
- 4 **High-Density Commercial (Condition 10-ب):** Applies to 76 parcels. Allows 50% lot coverage, maximum of 10 floors, and a maximum height of 40 meters.
- 5 **Low-Density Commercial (Condition 2-ب):** Applies to 24 parcels. Allows 60% lot coverage, maximum of 2 floors, and a maximum height of 12 meters.

These parcels collectively house **4,234 registered units**, with the majority of parcels containing either two units (1,524 parcels) or a single unit (556 parcels), indicating a prevalence of duplexes and single-family villas.

4. Buildings and Construction Permits

The physical footprint of the district includes **1,979 standing buildings**, covering a total ground footprint area of **634,565 square meters**. The median building footprint is 216.2 square meters, though major commercial structures reach up to 10,532 square meters. The building footprint data is sourced from the General Authority for Survey and Geospatial Information (GCS).

Ongoing construction and renovation are tracked via **1,012 active building permits**. The permit database tracks detailed operational data across 48 unique blocks, with the highest concentration of permits in Block 40 (62 permits) and Block 35 (47 permits).

The permit areas range from 450 m² to 14,601 m², with a median of 890 m². The historical distribution of initial license dates (in Hijri years) shows peak construction activity occurred in 1425 AH (121 permits), 1424 AH (99 permits), and 1423 AH (93 permits). The permits are categorized primarily into Residential (961), Commercial (22), Investment (18), Religious (6), and Educational (3).

5. Transport Infrastructure and Road Network

Ash Shati Ash Sharqi boasts a highly developed, **128.9-kilometer road network** composed of **220 distinct road segments**. The average road segment length is 586 meters. The road data is owned by the Municipal Digital Transformation Center.

The network features **217 uniquely named streets** (with 210 unique English translations). The major arterial corridors carrying the highest traffic volumes are:

- **Prince Mohammed bin Fahd Road:** The longest continuous corridor at 24.1 kilometers.
- **King Abdullah bin Abdulaziz Road:** The primary commercial spine at 21.2 kilometers.
- **Al Khaleej (Gulf) Road:** The coastal arterial route spanning 17.8 kilometers.

Road Characteristics

The road segments are classified into five functional types: Local/Type 7 (194 segments), Collector/Type 6 (13 segments), Arterial/Type 5 (8 segments), Highway/Type 2 (4 segments), and Type 4 (1 segment). The physical widths of the roads are highly standardized, with the vast majority being 18 meters wide (125 roads) or 8 meters wide (48 roads). Larger corridors feature widths of 16m (22 roads), 20m (12 roads), 25m (8 roads), 30m (2 roads), 60m (2 roads), and 40m (1 road).

Supporting Infrastructure

The road network is supported by extensive municipal infrastructure:

- **Street Lighting:** 1,829 light poles ensure comprehensive nighttime visibility. Nearly all lights (1,823) are classified under material code 2.
- **Pedestrian Pavements:** 591 dedicated pavement segments covering 262,277 square meters of walkable surface. The average pavement segment covers 443.8 m². The majority of pavements (520 segments) consist of a single path, while 32 segments have two paths.
- **Advertising Signs:** 69 licensed advertising signs are strategically placed, primarily along Gulf Road (19 signs) and King Abdullah Road (16 signs). Most signs operate under 8 unique municipal contracts (e.g., contract 37/32 covers 20 signs, contract 40/42 covers 15 signs). The physical height of these signs ranges from 0.57 meters to 6.0 meters, with 0.57m being the most common height (10 signs).

6. Public Utilities, Safety, and Excavation Works

The district's utility grid is continuously monitored and upgraded.

Fire Safety and Water Infrastructure

Fire safety coverage is robust, with **265 fire hydrants** distributed throughout the residential and commercial blocks, providing a ratio of approximately one hydrant for every 7.5

buildings. Water pressure and distribution are managed by **4 major municipal pump stations**, operated by the General Directorate of Emergencies and Crises.

Excavation and Digging Permits

To maintain and upgrade this infrastructure, the municipality manages an active database of digging permits, which includes **136 point permits** and **253 linear trench permits**.

Point Permits (136): These are older, localized works primarily requested between October 2015 and January 2016. The most common activities include the construction of electricity distribution lines (13 permits), subscriber electrical extensions (12 permits), electrical cable installations (12 permits), low-voltage cable works (9 permits), FTTH optical network installations (4 permits), and traffic signal supply/maintenance (3 permits).

Linear Trench Permits (253): These represent more recent, extensive network upgrades spanning 15.6 kilometers in total length (average trench length of 62 meters). The works are geographically split between Central Dammam (178 permits) and East Dammam (75 permits). Most of these works occurred between 2022 and 2023, with typical project durations of 7 days (94 permits) or 6 days (56 permits).

The linear works are executed by 18 unique contractors, dominated by:

- Al-Manar Arabian Contracting Est. (94 permits)
- Alkhorayef Water and Power Technologies (64 permits)
- Ali Haider Al-Yami Trading & Contracting Co. (19 permits)
- Esnad Al-Joudah Contracting Co. (15 permits)
- Al-Janahin Contracting Co. (10 permits)

The streets most heavily impacted by these recent linear works include King Abdullah Road (20 permits), Street 12D (12 permits), Street 8D (11 permits), and Street 8B (9 permits).

7. Educational Facilities

The district is a major educational hub, hosting **14 registered schools** that cater to all academic stages. The facilities are a mix of national curriculum and international programs, though notably, **all 14 schools are private (أهلية)** with zero public schools detected.

- 6 **Noor Al-Islam Educational Complex:** Includes a Primary school (418 students), Intermediate school (396 students), and a Secondary school with tracks (355 students).

- 7 **Al-Bassam Educational Complex:** Includes a Primary school (375 students), Secondary school with tracks (275 students), and an Intermediate school (210 students).
 - 8 **Al-Bassam International Programs:** Offers Primary (250 students), Intermediate (160 students), and Secondary (80 students) international tracks.
 - 9 **Al-Nukhba Al-Ilmiyya Complex:** Includes a Secondary school with tracks (350 students), Primary school (200 students), and Intermediate school (150 students).
 - 10 **Al-Hussan Model Schools:** Provides dedicated Kindergarten and Primary education facilities for girls.
-

8. Government and Civic Services

Ash Shati Ash Sharqi serves as a critical node for government services, housing **20 official government facilities** that provide judicial, administrative, and utility services to the wider Dammam area:

- **Judicial & Security:** The Administrative Court (محكمة إدارية), the Human Rights Commission (هيئة حقوق الإنسان), and the North Dammam Field Safety Center for Civil Defense (مركز السلامة الميدانية بشمال الدمام).
- **Civil Services:** The Civil Affairs Office located inside Al Shati Mall, the Women's Labor Office, and the Real Estate Development Fund (Dammam branch).
- **Automated Services:** Two Absher self-service kiosks (جهاز خدمة أبشر) located at key commercial nodes for citizen convenience.
- **Utility Administration:** The General Directorate of Water in Dammam, and Al Shati Power Station No. 2 operated by the Saudi Electricity Company.

Additionally, the district contains **42 public facilities**, 38 of which are officially designated as public parking lots (موقف سيارات), ensuring adequate parking capacity for the commercial and governmental nodes. The district features exactly **23 mosques** (22 regular and 1 Jami/Friday mosque).

Healthcare Deficit

A critical finding from the geodatabase is the severe lack of primary healthcare infrastructure. The data reveals **zero primary health centers or clinics**. The only healthcare infrastructure consists of one parcel zoned for a general hospital (مستشفى عام) and three commercial pharmacies.

9. Commercial and Retail Ecosystem

The local economy is driven by **303 commercial service establishments**. The retail landscape is anchored by major shopping malls and hypermarkets, including **Al Shati Mall**, **Lulu Hypermarket**, and multiple branches of **Panda** and **Pandati**.

The commercial sector is highly diversified, with 55 named establishments captured in the system:

- **Healthcare:** Multiple branches of Al-Dawaa Pharmacy (صيدلية الدواء) and Arkestra Pharmacy.
- **Dining and Hospitality:** Restaurants such as Applebee's, Layalina Restaurant, and Aryaf Al-Dammam, alongside hotels like Best Western.
- **Automotive Services:** SASCO fuel station, Petromin Express, and specialized car wash services like Bubble Time and Mobile Luxury Car Wash.
- **Retail and Fashion:** City Max, Twenty4, Steps Shoes, and Al-Mutlaq Furniture.
- **Personal Care:** Numerous salons and spas including Flamingo Women's Spa, Herbal Leaves Women's Salon, and White House Barbershop.
- **Corporate Offices:** Includes maritime logistics offices like MSC Saudi (Mediterranean Shipping Company).
