

Rashid GIS Agent — Keyword Activation V3

This document contains the keyword trigger configuration for the Beyond Presence avatar agent. Each keyword maps to a specific data-driven response.

Configuration

Agent Mode: Active Conversation

Trigger words (Comma separated): district overview, land use, parcels, buildings, roads, schools, government services, commercial, fire safety, infrastructure, zoning, planning, digging, population, value, healthcare, parks, mosques, contractors, permits, road widths, lighting, parking, neighborhoods

Keyword-to-Answer Mapping

Keyword: district overview Response: Ash Shati Ash Sharqi is a major coastal district in Dammam, Eastern Province. It has a registered population of 16,380 residents and covers a computed area of 4.48 square kilometers with a perimeter of 12.2 kilometers. The district falls under the Eastern Province Municipality and contains 2,676 land parcels, 1,979 buildings, and a 128.9-kilometer road network across 217 named streets.

Keyword: land use Response: The district contains 2,676 land parcels across 34 distinct land use categories. The dominant use is residential with 1,966 parcels. Commercial parcels account for 248 plots. Religious facilities including 22 mosques, 1 Jami mosque, and 46 associated housing units occupy 68 parcels. Educational facilities take 12 parcels, while 37 parcels are designated as public parking. Other uses include water wells, pump stations, electrical rooms, a fuel station, a post office, a municipal branch, a general hospital, a telephone exchange, and parks.

Keyword: parcels Response: There are 2,676 land parcels with a total measured area of 2.69 square kilometers. The median parcel size is 750 square meters, with a minimum of 16 and a maximum of 30,265 square meters. Currently, 2,256 parcels are developed at 84.3%, 1,478 hold active licenses, and 123 are municipal investments. Critically, 778 parcels are developed but lack active licenses, representing a 29.1% compliance gap. The district contains 4,234 registered units across three configurations: 1,524 duplexes, 556 single-unit villas, and 105 six-unit apartment buildings.

Keyword: buildings Response: The district has 1,979 standing buildings covering a total footprint of 634,565 square meters. The median footprint is 216 square meters and the largest is 10,532 square meters. The building data is sourced from the General Authority for Survey and Geospatial Information. Additionally, 1,012 active building permits are tracked across 48 blocks, with Block 40 having the most activity at 62 permits.

Keyword: permits Response: There are 1,012 active building permits in the district. By type: 961 residential, 22 commercial, 18 investment, 6 religious, 3 educational, 1 pump station, and 1 post office. The permit areas range from 450 to 14,601 square meters with a median of 890. The peak construction period was 1425 AH with 121 permits issued. All permits fall under subdivision plan 337 and are distributed across 48 unique blocks.

Keyword: roads Response: The district features a 128.9-kilometer road network of 220 segments with 217 uniquely named streets. The network is classified into 194 local roads, 13 collector roads, 8 arterial roads, and 4 highway-grade roads. The three major corridors are Prince Mohammed bin Fahd Road at 24.1 kilometers, King Abdullah Road at 21.2 kilometers, and Gulf Road at 17.8 kilometers.

Keyword: road widths Response: Road widths are distributed across 8 categories: 18 meters is the most common at 125 roads, followed by 8 meters at 48 roads, 16 meters at 22, 20 meters at 12, 25 meters at 8, 30 meters at 2, 60 meters at 2 for the widest arterials, and 40 meters at 1 road. The 18-meter width is the standard for the district's local road grid.

Keyword: lighting Response: The district has 1,829 street light poles, equating to 14.2 lights per kilometer. This is significantly below the urban benchmark of 30 to 40 lights per kilometer. The average spacing between lights is 70.5 meters instead of the recommended 25 to 30 meters, meaning the district is 53% below the minimum standard. Nearly all lights use material code 2.

Keyword: schools Response: The district hosts 14 educational facilities with a total capacity of 3,219 students, covering 98.3% of the estimated school-age population. The largest is Noor Al-Islam Primary at 418 students. International programs are available through the Al-Bassam complex. A critical finding is that 100% of schools are private with zero public education facilities.

Keyword: government services Response: The district hosts 20 government facilities including the Administrative Court, Human Rights Commission, Civil Defense Center, Civil Affairs Office in Al Shati Mall, Women's Labor Office, Real Estate Development Fund, two Absher self-service kiosks, General Directorate of Water, and Al Shati Power Station No. 2.

Keyword: commercial Response: The local economy is driven by 303 commercial establishments with 55 named businesses. Major anchors include Al Shati Mall, Lulu Hypermarket, Panda, and Pandati. The sector spans healthcare, dining, automotive, retail, personal care, and corporate offices including MSC Saudi.

Keyword: fire safety Response: The district has 265 fire hydrants providing a ratio of 1 per 7.5 buildings, within the NFPA standard of 1 per 5 to 8. The hydrant density is 59.2 per square kilometer. Civil Defense is present through the North Dammam Field Safety Center.

Keyword: infrastructure Response: Infrastructure includes 1,829 street lights, 591 pavement segments covering 262,277 square meters, 265 fire hydrants, 4 pump stations, and 69 advertising signs under 8 contracts. The municipality manages 389 digging permits covering 15.6 kilometers of trench works executed by 18 contractors.

Keyword: zoning Response: There are 10 distinct building condition codes. Standard residential allows 60% coverage, 2 floors, and 10 meters, applying to 2,188 parcels. Standard commercial allows 4 floors and 19 meters at 121 parcels. High-density commercial allows 10 floors and 40 meters at 76 parcels. Secondary residential allows 4 floors and 15.5 meters at 91 parcels.

Keyword: planning Response: Two approved subdivision plans govern the district. Plan 1/337, approved 1408 AH, covers 7.23 square kilometers with height and setback regulations. Plan Sh D 908, approved 1423 AH, reorganized 32,869 square meters of commercial land. The district has four neighborhoods with the Second Neighborhood Third Adjacency being the largest at 818 parcels.

Keyword: neighborhoods Response: The district is organized into four main neighborhoods. The Second Neighborhood Third Adjacency has 818 parcels, the Third Neighborhood Fifth Adjacency has 698, the First Neighborhood First Adjacency has 634, and the Fourth Neighborhood Seventh Adjacency has 516 parcels.

Keyword: digging Response: There are 389 digging permits: 136 point permits from 2015-2016 and 253 linear trench permits from 2022-2023 covering 15.6 kilometers. Point permit works include electricity distribution, subscriber extensions, FTTH fiber, and traffic signals. Linear works are executed by 18 contractors led by Al-Manar Arabian Contracting with 94 permits. The most affected streets are King Abdullah Road with 20 permits and Street 12D with 12.

Keyword: contractors Response: Infrastructure works are executed by 18 unique contractors. The top five are Al-Manar Arabian Contracting Establishment with 94 permits, Alkhorayef Water and Power Technologies with 64, Ali Haider Al-Yami Trading and Contracting with 19, Esnad Al-Joudah Contracting with 15, and Al-Janahin Contracting with 10. Most projects have durations of 6 to 7 days.

Keyword: healthcare Response: A critical gap exists. The WHO benchmark requires at least 1.5 primary health centers for 16,380 residents. The GIS data reveals zero primary health centers or clinics. The only healthcare infrastructure is one parcel zoned for a general hospital and three commercial pharmacies.

Keyword: parks Response: The district has a severe green space deficit. Only 2 small parcels are designated as parks. The WHO recommends 9 square meters per capita, requiring

147,420 square meters. The current provision falls drastically short for a 4.48 square kilometer coastal district.

Keyword: mosques Response: There are 23 mosques: 22 regular and 1 Jami Friday mosque. The ratio of 1 per 712 residents is within the Saudi benchmark of 1 per 500 to 800. However, only 1 Jami mosque exists where 2 to 3 are typically needed for this population size.

Keyword: parking Response: Out of 42 public facilities, 38 are designated parking lots. With 303 commercial establishments, this provides a ratio of only 0.13 parking lots per commercial business, or roughly 1 parking lot per 8 businesses. This severe imbalance likely causes congestion and illegal street parking.

Keyword: population Response: The district has 16,380 residents within the broader Dammam municipality of 1,255,211. The population density is 3,657 per square kilometer. The 4,234 units serve this population at an average of 3.9 persons per unit. Most parcels contain duplex-style two-unit configurations.

Keyword: value Response: This digital GIS capability transforms raw geodatabase queries into instant strategic insights. Today I identified that 778 parcels lack licenses, all 14 schools are private, street lighting is 53% below standard, and there are zero healthcare facilities, all within seconds. This model can be replicated across all 17 Amanas nationwide.
